Business Requirements Document: SaaS Sales, Discount and Profitability Dashboard

Field	Detail
Document Title	Business Requirements Documents: SaaS Sales, Discount and Profitability Dashboard
Version	1.0
Author	Manju Suthar
Date	10 September 2026
Status	Final
Data source	Public sample dataset (fictional company)

1. Purpose

This document sets out the business requirements for a Power BI dashboard that shows which products and customer segments make money and where discounts reduce profit.

2. Business problem (assumed scenario)

Management sees revenue, but not profit by discount level. Discounts are approved without a view of their effect on profit, so loss-making order lines go unnoticed until the monthly MIS pack.

3. Objectives

- Show revenue, profit, margin %, average discount and loss-making line % in one view.
- Identify the discount level above which order lines turn loss-making.
- Rank products and customers by profit and flag those losing money.
- Give a what-if view of a discount cap, labelled as a scenario and not a forecast.

4. Scope

- In scope: a four-page Power BI dashboard on 9,994 order lines (2020 to 2023), with Order year, Segment and Region slicers linked across all pages.
- Out of scope: forecasting, live data refresh, sales-rep performance, and retention analysis (every customer in this sample is a repeat customer, so retention would show 100%).

5. Stakeholder personas (fictional)

Persona	Role	Decision they make	What they need
Priya Nair	Finance Manager	Approves the discount policy	Margin by discount tier, profit lost above 20% (Page 2)
Rahul Mehta	Head of Sales	Negotiates discounts with customers	Profit by segment, top and bottom customers (Pages 1 and 4)
Neha Kapoor	Product Manager	Sets pricing and bundles	Product scorecard, product by segment (Page 3)
Arjun Rao	MIS Analyst	Prepares the monthly pack	Consistent KPIs and silcers on every page

6. Business requirements

ID	Requirements	Persona	Priority
BR-01	Show revenue, profit, margin %, average discount and loss-making line % on one page	Arjun Rao	High
BR-02	Show loss-making line % and profit for each discount tier, ordered from 0% to 40%+	Priya Nair	High
BR-03	Show profit and margin for each product, and product by segment	Neha Kapoor	High
BR-04	Show the top 10 and bottom 10 customers by profit	Rahul Mehta	Medium
BR-05	Slicers for Order year, Segment and Region must filter every page	All	High
BR-06	Every number must reconcile to the source total (profit 286,397)	Arjun Rao	High

7. Functional Requirements

ID	Page	Requirement	Traces to
FR-01	Executive Overview	Five KPI cards, monthly profit line chart, profit by segment bar chart	BR-01, BR-05
FR-02	Discount Impact	Loss-making line % and profit by discount tier, plus a card for profit on lines above 20% discount	BR-02
FR-03	Product Drill-down	Product bar chart, scorecard table, product by segment matrix	BR-03
FR-04	Customers	Customer count, profit per customer, top 10 and bottom 10 charts	BR-04

8. KPI definitions

KPI	Definition	Value
Total Revenue	Sum of Sales	2,297,201
Total Profit	Sum of Profit	286,397
Margin %	Total Profit ÷ Total Revenue	12.5%
Avg Discount	Average of Discount	15.6%
Loss Line %	Loss-making order lines ÷ all order lines	18.7%
Profit above 20 %	Profit on lines with discount above 20 %	-135,376
Profit per Customer	Total Profit ÷ distinct customers	2,893 (99 customers)

9. Non-functional requirements

- Usability: each page fits one screen at 16:9 with no scrolling and no cut-off numbers.
- Consistency: the same fonts, colours and KPI definitions on every page.
- Accuracy: all totals reconcile across pages.
- Disclosure: every page shows the label “Fictional SaaS company, public sample data”.

10. Assumptions and limitations

- Assumptions: the data is a public sample for a fictional company. One “line” is one order line. Discount tiers are 0%, 1-10%, 11-20%, 21-30%, 31-40% and 40%+.
- Limitations: discount and profit move together in this data, which shows association and not cause. Retention is not reported because every customer in the sample is a repeat customer.
- Risk: a real company’s data could behave differently, so these results should not be applied to it without testing.
- Source: Amazon AWS SaaS Sales Dataset (Kaggle, nnthanh101).

11. Acceptance criteria

- Profit shows 286,397 on Page 1, and the Page 3 scorecard and matrix totals match.
- Page 2 shows -135,376 for lines above 20% discount.
- A slicer choice on any page changes all four pages.
- No number or label is cut off in the PDF export.

12. Glossary:

Term	Meaning
Order line	One product row within an order
Margin %	Profit divided by revenue
Discount tier	A discount band: 0%, 1-10%, 11-20%, 21-30%, 31-40%, 40%+
Loss-making line	An order line with negative profit
